

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. – 8. (Canceled)

9. (Currently Amended) A computer implemented method of associating information received by a client from a server with an object, comprising:

locating, at the client, a start identifier and an end identifier in the information received from the server, wherein the end identifier corresponds to the start identifier;

identifying, at the client, a first object associated with at least one of the start identifier and the end identifier, wherein the first object comprises server side code stored at the client; ~~and~~

storing, at the client, an item of information appearing between the start identifier and the end identifier in association with the first object, wherein the item of information comprises a result generated by the server in accordance with the first object;

locating a special attribute identifier in the information received from the server;

identifying a second object associated with the special attribute identifier; and

storing information corresponding to the special attribute identifier in association with the second object, wherein the information corresponding to the special attribute identifier comprises information surrounding the special attribute identifier.

10. (Canceled)

11. (Previously Presented) The method of claim 9 wherein:

each of the start identifier and the end identifier comprises an object identifier; and

identifying the first object comprises matching the start identifier and the end identifier with a first object identifier.

12. (Previously Presented) The method of claim 9 wherein the start identifier and the end identifier comprise unique identifiers.

13. (Previously Presented) The method of claim 12 wherein the start identifier comprises an even number and the end identifier comprises an odd number, wherein the value of the end identifier is greater than the value of the start identifier.

14. – 26. (Canceled)

27. (Currently Amended) A computer program product comprising a computer useable medium having computer readable program code embodied therein for associating information received by a client from a server with an object, the computer program product comprising computer readable program code devices configured to cause a computer to:

locate, at the client, a start identifier and an end identifier in the information received from the server, wherein the end identifier corresponds to the start identifier;

identify, at the client, a first object associated with at least one of the start identifier and the end identifier, wherein the first object comprises server side code stored at the client; ~~and~~

store, at the client, an item of information appearing between the start identifier and the end identifier in association with the first object, wherein the item of information comprises a result generated by the server in accordance with the first object;

locate a special attribute identifier in the information received from the server;
identify a second object associated with the special attribute identifier; and
store information corresponding to the special attribute identifier in association with the second object; wherein the information corresponding to the special attribute identifier comprises information surrounding the special attribute identifier.

28. (Canceled)

29. (Previously Presented) The computer program product of claim 27 wherein:
each of the start identifier and the end identifier comprises an object identifier; and
the computer readable program code devices configured to cause a computer to identify
the first object further comprise computer readable program code devices configured to cause a
computer to match the start identifier and the end identifier with a first object identifier.

30. (Previously Presented) The computer program product of claim 27 wherein the start
identifier and the end identifier comprise unique identifiers.

31. (Previously Presented) The computer program product of claim 30 wherein the start
identifier comprises an even number and the end identifier comprises an odd number, wherein
the value of the end identifier is greater than the value of the start identifier.

32.– 46. (Canceled)

47. (Currently Amended) A system comprising:
a server configured to transmit information; and
a client computer configured to receive information from the server, wherein the client
computer is further configured to perform operations comprising:
 locating a start identifier and an end identifier in the information received from
the server, wherein the end identifier corresponds to the start identifier;
 identifying a first object associated with at least one of the start identifier and the
end identifier, wherein the first object comprises server side code stored at the client; and
 storing an item of information appearing between the start identifier and the end
identifier in association with the first object, wherein the item of information comprises a result
generated by the server in accordance with the first object;
 locating a special attribute identifier in the information received from the server;
 identifying a second object associated with the special attribute identifier; and

storing information corresponding to the special attribute identifier in association with the second object, wherein the information corresponding to the special attribute identifier comprises information surrounding the special attribute identifier.

48. (Previously Presented) The system of claim 47, wherein:
each of the start identifier and the end identifier comprises an object identifier; and
the client computer is configured such that identifying the first object comprises matching the start identifier and the end identifier with a first object identifier.

49. (Previously Presented) The system of claim 47, wherein the start identifier and the end identifier comprise unique identifiers.

50. (Previously Presented) The system of claim 49, wherein the start identifier comprises an even number and the end identifier comprises an odd number, wherein the value of the end identifier is greater than the value of the start identifier.

51.– 53. (Canceled)

54. (New) A computer implemented method of associating information received by a client from a server with an object, comprising:

locating, at the client, a start identifier and an end identifier in the information received from the server, wherein the end identifier corresponds to the start identifier;

identifying, at the client, a first object associated with at least one of the start identifier and the end identifier, wherein the first object comprises server side code stored at the client;

storing, at the client, an item of information appearing between the start identifier and the end identifier in association with the first object, wherein the item of information comprises a result generated by the server in accordance with the first object;

locating a special attribute identifier in the information received from the server;

identifying a second object associated with the special attribute identifier; and

storing information corresponding to the special attribute identifier in association with the second object, wherein the information corresponding to the special attribute identifier comprises a tag and the special attribute identifier comprises an attribute of the tag .

55. (New) A computer program product comprising a computer useable medium having computer readable program code embodied therein for associating information received by a client from a server with an object, the computer program product comprising computer readable program code devices configured to cause a computer to:

locate, at the client, a start identifier and an end identifier in the information received from the server, wherein the end identifier corresponds to the start identifier;

identify, at the client, a first object associated with at least one of the start identifier and the end identifier, wherein the first object comprises server side code stored at the client;

store, at the client, an item of information appearing between the start identifier and the end identifier in association with the first object, wherein the item of information comprises a result generated by the server in accordance with the first object;

locate a special attribute identifier in the information received from the server;

identify a second object associated with the special attribute identifier; and

store information corresponding to the special attribute identifier in association with the second object, wherein the information corresponding to the special attribute identifier comprises a tag and the special attribute identifier comprises an attribute of the tag.

56. (New) A system comprising:

a server configured to transmit information; and

a client computer configured to receive information from the server, wherein the client computer is further configured to perform operations comprising:

locating a start identifier and an end identifier in the information received from the server, wherein the end identifier corresponds to the start identifier;

identifying a first object associated with at least one of the start identifier and the end identifier, wherein the first object comprises server side code stored at the client;

storing an item of information appearing between the start identifier and the end identifier in association with the first object, wherein the item of information comprises a result generated by the server in accordance with the first object;

locating a special attribute identifier in the information received from the server;

identifying a second object associated with the special attribute identifier; and

storing information corresponding to the special attribute identifier in association with the second object, wherein the information corresponding to the special attribute identifier comprises a tag and the special attribute identifier comprises an attribute of the tag.
